## Fighting Food Waste in Hotels

Producing the food we eat has a tremendous impact on our planet. Wasting that food wastes everything that goes into food production including energy, water and wildlife habitat. To have a successful food management strategy in place, your property should be 1) separating food waste from all other waste, 2) measuring the amount generated on a daily or weekly basis, 3) using measurement information to put in place prevention strategies, 4) donating what cannot be prevented, and 5) diverting away from landfill what cannot be prevented or donated. The following checklist is a high-level overview of how to achieve these 5 pillars with references to where more information can be found in the Fighting Food Waste in Hotels toolkit.

SE	PARATION		EVENT WASTE DURING INGREDIENT
	Choose a separation scheme that fits your needs and budget. Chapter 5: Separation & Measurement, Step 1		EPARATION AND MEALS apter 6: Prevention, page 31
	Procure and place bins (preferably green for food waste) in appropriate areas of the hotel to		Inform ingredient and meal prep quantities with accurate guest counts
	capture all waste streams. Chapter 5: Separation & Measurement, Step 2		Use observed and/or historic data to inform menu development (e.g., heavy meat eaters or low carb group)
	Train and monitor staff on new separation system. See Chapter 5: Separation & Measurement, Step 3 and HotelKitchen.org/Training for videos		Maintain appropriate portion sizes – note: the average person consumes <1.2 pounds/meal
MF	EASUREMENT		EVENT WASTE DURING AND AFTER SERVICE apter 6: Prevention, page 32 & Appendices D & J
	Choose an appropriate measurement process or		Revamp breakfast and event buffets with low-waste serving designs
	technology that fits your needs and budget. Options include requesting improved reporting from waste haulers, manual daily bin counts, or installing measurement technology and diversion.  Chapter 5: Separation & Measurement, Step 1		Efficiently refill and break down buffets to ensure sufficient food is provided with minimal food left after service
	Gather data using your measurement system over the course of a set time period to establish a baseline – ideally striving for a waste per guest (cover) metric.		Prepare guest messaging to encourage conscious consumption for inclusion on tables or buffet lines – sample messaging can be found in Chapter 4: Getting Started, page 18
	Chapter 5: Separation & Measurement, Step 4  Set goals to reduce overproduction and rescue underutilized food. Chapter 5: Separation &		Maximize possible donation by maintaining food safety standards of food prepared but not put out for service
	Measurement, Step 5	DO	INATION
PR	EVENTION		Identify a trusted and experienced food recovery
